## “A Cost Saving Facility Solution”

Evacuation Pump

Mop Sink

Fit and Finish

### General Information

The standard units are made of 14 gauge 304SS or 201SS panels that are fastened together to form the unit. The stainless steel panels are laser cut, formed, and all edges ground smooth. The units are complete with a stainless steel vented sump tank with sump pump, backflow preventer, stack light, incoming water shutoff during high sump level, 12-gallon electric water heater, and GFI protected circuits. The units are pre-piped and pre-wired. Drinking fountains, eye wash stations, and drench showers, along with other customer requested options are available.
